

Practical Exercise: Validate WSO2 API Manager Environment

Training Objective

During this exercise, you will be able to validate if your clustered environment is running properly.

Business Scenario

PizzaShack wants to make sure a new environment works correctly before moving it to handle production load.

High-Level Steps

Run the following practical exercises from WSO2 API Manager Developer Fundamentals course and make sure you do it with one node at a time:

- Practical Exercise: Creating and Publishing the PizzaShack API
- Practical Exercise: Subscribing to APIs
- Practical Exercise: Invoking the API
- Practical Exercise: Working with Throttling Policies

Notes:

- You only need to create the PizzaShack API once. Make sure that you can call it on both nodes.
- **This environment will be used during training. In order to make sure you can continue with all other steps, this Lab should not be skipped.**

Expected Outcome

WSO2 API Manager pattern #1 is tested and working as expected.
